

SARA is watching over you

State-of-the-art technology for maximum resident safety

WHAT DOES SARA STAND FOR?

SARA stands for **Situational Awareness and Response Assistant**. SARA ensures **campus-wide protection** of residents of senior living communities. Safety is taken to a new level by protecting residents **beyond** the apartment setting.

HOW DOES SARA WORK?

Combining software with hardware to alert and report, SARA monitors events typically found in senior communities and notifies staff via two-way radios, phones, cell phones, pagers, text message or email about falls, wandering or any event that needs attention. **It even integrates to most existing nurse-call systems.** With safety being a prime motivation for the move to a retirement community, this is an important advance.

HOW DOES SARA DETECT AND ALERT?

SARA searches for potential emergencies, looking in places that are difficult for facility staff to monitor. When SARA detects a problem, it notifies the appropriate people, wherever they are so they can respond quickly. The nurse-call function even works **outside** the facility, extending protection to courtyards, grounds and parking lots. SARA stores all of these events and alerts into a historical reporting system to aid with accountability and staff management.

ARE THERE OTHER SARA FEATURES?

As part of the basic system, the unique "voice" of SARA can also call residents and family members to keep them aware of emergencies, community events and activities, increasing participation in community events by as much as 50%.

RESPONSETECH PROTECTS PEOPLE AND PROPERTY

Keeping people, property and Information safe is good business. Our security systems that can integrate with SARA provide the secure environment that keeps properties fully occupied so that administrators are free to focus their time and effort on their residents!

Security systems prevent loss caused by wrongdoers. They reduce operating costs for facilities managers and increase occupancy by providing a more inviting environment for residents. Our systems are designed to maximize security while minimizing cost; and because they are flexible and scalable, they can be adjusted to meet each resident's needs.

ResponseTECH systems are **wireless**. Wireless systems not only reduce installation costs, but eliminating the need to pull cables means that existing buildings can offer the same state-of-the-art protection technology as new construction.

BELOW ARE THE MOST POPULAR SOLUTIONS PROVIDED TO SENIOR LIVING COMMUNITIES:

- Full integration of wireless devices with existing hard-wired pull-cord systems, creating "hybrid" systems that leverage previous investments.
- Creating alerts from the front desk or nurse stations that are sent directly to staff pagers, cell phones, two-way radios or phone extensions with call escalation capabilities and detailed reporting of events and staff response times.
- Phone reminders that increase resident participation in community events by about 50%!
- Access control systems integrated to wanderer monitoring and CCTV.

THE ResponseTECH[®] ADVANTAGE

Personal safety is usually on the top of the list of factors considered when deciding to move to a retirement community. The technology of tomorrow to provide safety to residents at their new home is possible today with ResponseTECH and SARA.

Traditional wired pull cord systems are only useful for emergencies in the apartment, but studies show that **60% of falls in retirement living happen outside the apartment**. Our hi-tech user-friendly wireless systems protect residents wherever they go on the retirement community campus, and relay location and identity information to a variety of sources so that the help can be provided immediately.

This community features an advanced resident safety system. Call us or visit to learn more.

MAKING SENIOR LIVING SAFER

Bring your nurse call and life safety systems into the 21st Century with our state-of-the-art wireless systems. Maintain safety throughout the campus with:

- Wireless Nurse Call
- Wanderer Monitoring
- Fall Detection
- Asset Tracking
- Access Control
- Video Surveillance
- 24/7 Monitoring
- System Integration
